## **New! Esthetician Track**

This year there will be content specifically designed for estheticians! In addition to the

general sessions, there will be opportunities for estheticians to interact and learn together! More information coming soon!

CE credit will be available to Physicians, Nurses, Physician Assistants and Nurse Practitioners. For more information, [click here](#).

## Skincare Tips

### Exosomes & Retinoids

- Exosomes are nanosized extracellular vesicles that are of interest in regenerative medicine. They carry DNA, mRNA and miRNA as well as proteins, growth factors and lipids. Exosomes are now being studied as therapeutic agents in dermatology for treating hair loss, pigmentary disorders, photoaging and wound healing.
- Cosmetic retinoids, including retinol and retinaldehyde, are effective skin rejuvenating compounds. Studies have confirmed skin benefits including softening fine line and wrinkles, lightening hyperpigmentation and improving overall photodamage. Cosmetic retinoids are well tolerated and easily accessible over the counter.

For more tips like this, stay tuned to the SSS Newsletter, and plan to attend the 2023 Summit in Austin!

## On-Demand Education

The Science of Skincare Summit is pleased to bring you the 2022 Summit Education, On-Demand! Check out the Business of Skincare, Ingredients, Formulations, Nutraceuticals and more! We would like to thank the 2022 Diamond Sponsor, The Active Cosmetics Division of L'Oréal, for sponsoring this virtual content. Content is available now!

**SKINCARE**  
**CONFIDENTIAL**

Skincare Confidential is a new podcast for those who want to be in-the-know about what's trending, and what's next in topical skincare. Hosts Dr. Patti Farris and Dr. Ted Lain are board certified dermatologist, recognized experts in topical skincare and co-founders of the Science of Skincare Summit. In each episode, Skincare Confidential will give you an insider's view of the skincare industry. You will hear from research scientists, formulators, and leading physician experts on how products are developed, tested, and used to treat medical and cosmetic patients.
